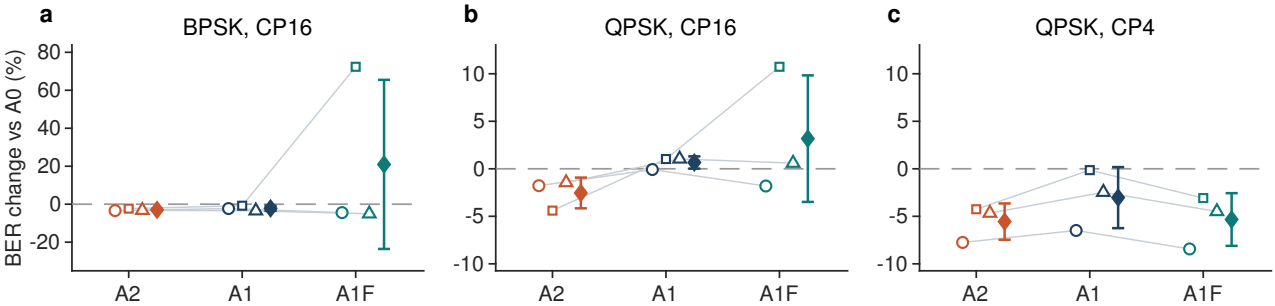
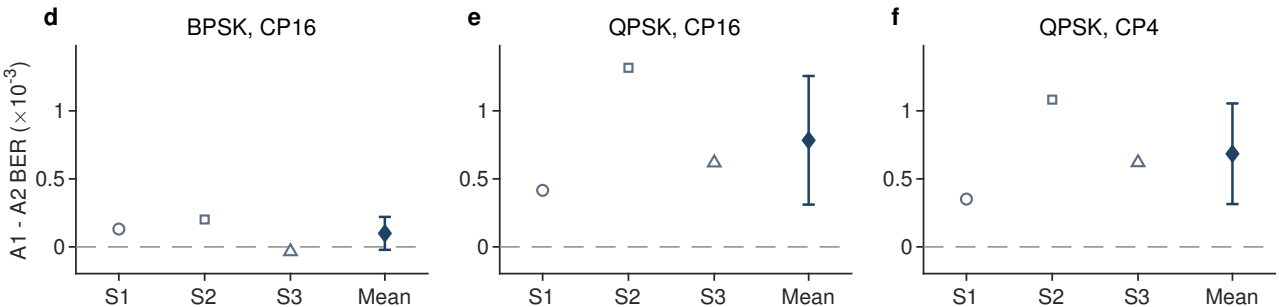
Fixed-budget adaptation versus frozen precision refinement

Controls: BER change from frozen W8A8 (A0); panel a uses an expanded scale



Primary: continued W8A8 (A1) minus original output-only A12 (A2)



A2: frozen output-only A12; A1: continued W8A8; A1F: continued W8A8 with frozen ranges.

Open circle / square / triangle: seeds 1 / 2 / 3. Filled diamond and whiskers: mean +/- sample SD.

Each seed averages eight fixed conditions. Negative change means lower BER. SD is not a confidence interval.
